

# FIND PVC MORE EFFICIENTLY THAN EVER BEFORE.

## AML+ SERIES | ALL MATERIALS LOCATOR

The AML Series are scientific instruments that utilize modulated, ultra high radio frequencies to find differences in subsurface densities. This offers the best method for locating PVC & PE pipes and nearly any other subsurface object that has an edge. Utilizing technology that was developed for lunar exploration, the AML will locate subsurface materials indiscriminately - plastic, metal, wood, cable or pipe. Unlike the deficiencies of GPR (Ground Penetrating Radar), the AML will work in clay, wet soil, snow or even standing water.

ALL NEW - TECHNOLOGICALLY ADVANCED

# AML PRO SERIES

- New Microprocessor Intelligence
- Patented Radio Wave Technology
- Lightweight Constuction (2.5 lbs.)
- Noise Isolating Headphones
- Rechargeable Lithium Battery
- Customizable User Preferences
- USB Powered Port
- Backlit Display
- GPS Plotting & Tracking
- 32 Sensitivity Settings
- 3 Year Limited Warranty
