# SUBSURFACE DIGITAL QUATRO CORRELATOR LC-5000

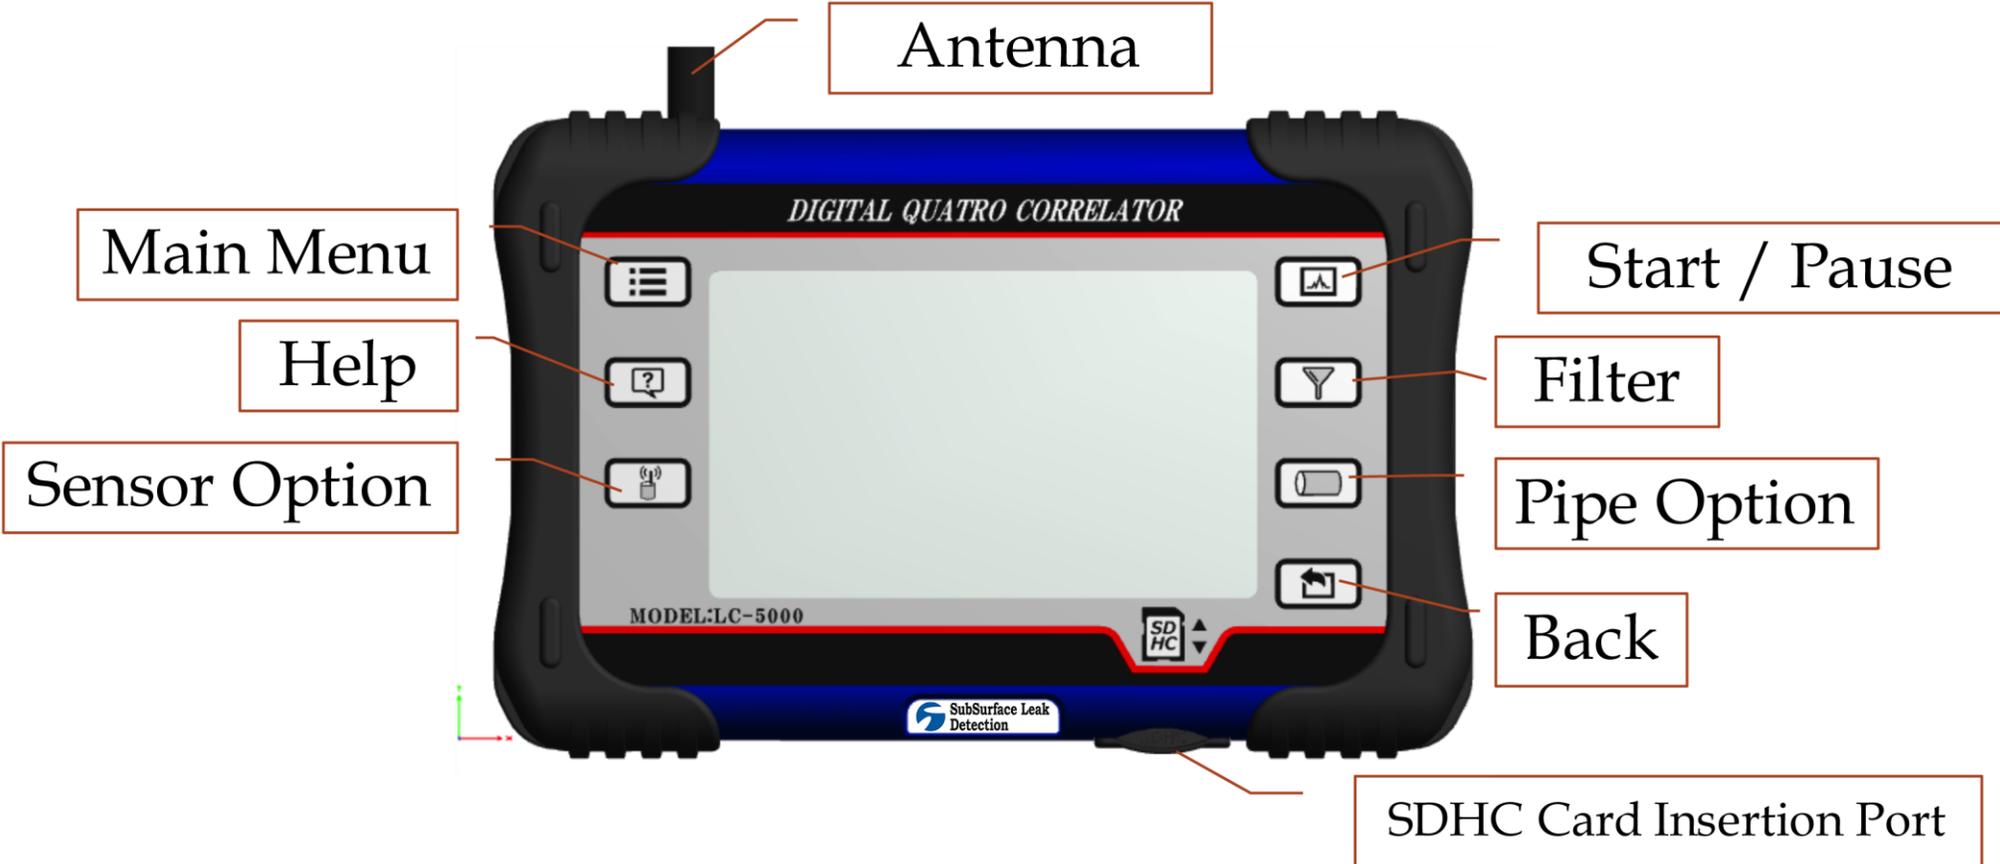

# LC-5000

---

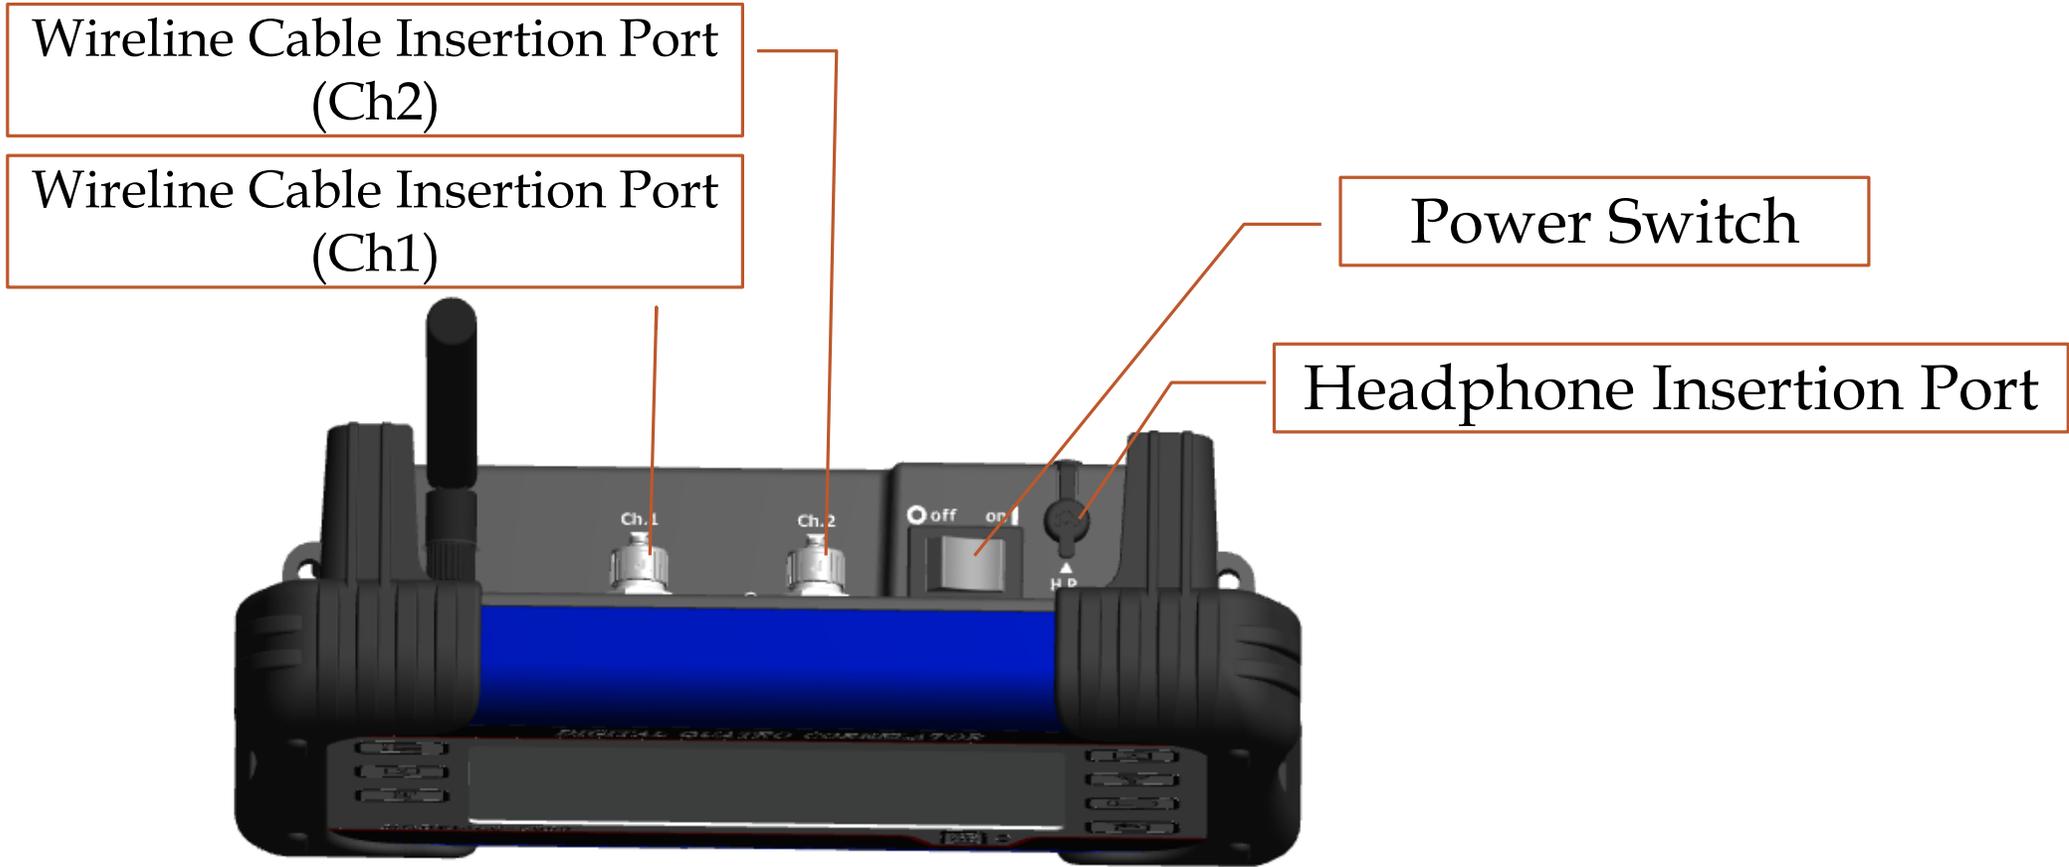

- Tough with resin body and rubber protection.
- 7 inches display and touch panel.
- Rechargeable lithium-ion batteries.

# Main Unit

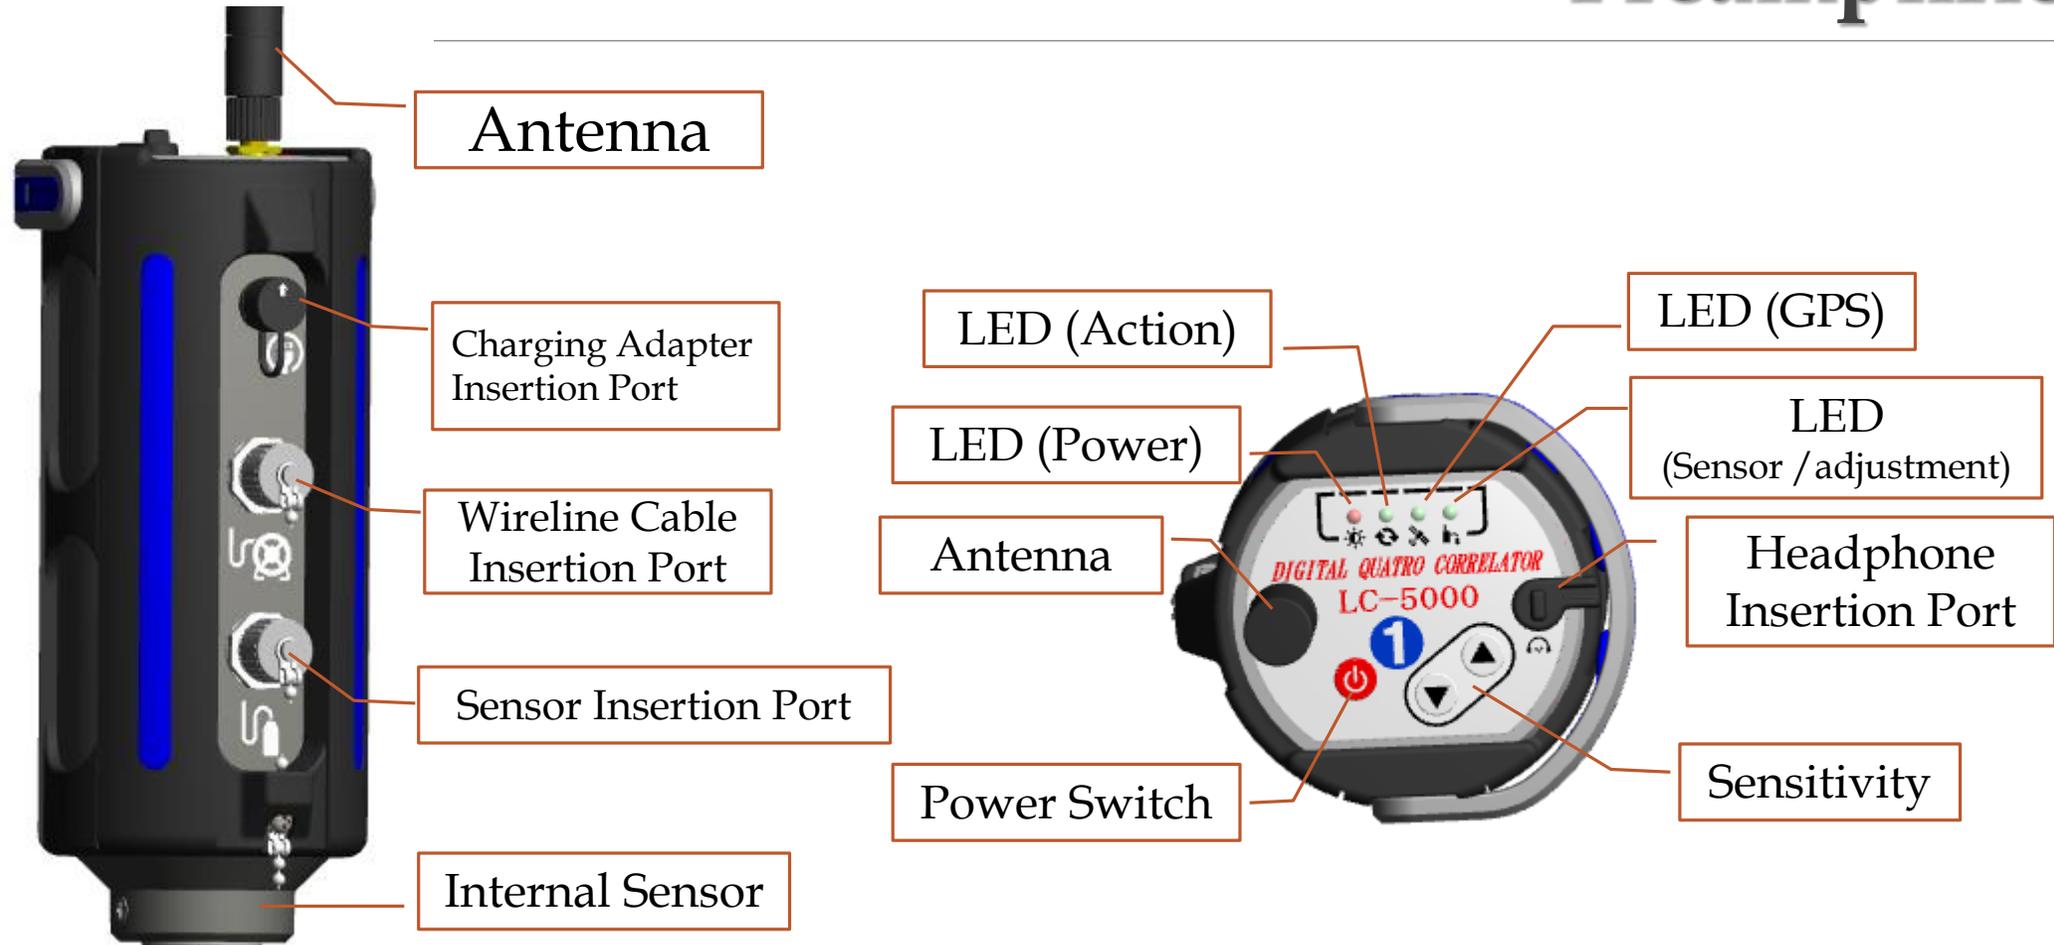

# Main Unit

---

# Preamplifier

# Comparison with LC-2500

---

	LC-5000	LC-2500
<b>Main Unit</b>	11"x6.3"x2.7" 5.7 lbs	7.8"x9.8"x4" 6.8 lbs
<b>Preamplifier</b>	3.14"x16" 2.2 lbs	6"x4.3"x14.5" 6.3 lbs
<b>Heat Resistant Temperature</b>	-4~+120° F	14~+120° F

# Power Supply

---

	Main Unit	Preamplifier
Changing Batteries	Exchangeable (Battery pack type)	NOT Exchangeable
Operation Time	8 hours or longer	8 hours or longer*
Recharge Time	About 5 hours	7.5 hours (Usable for about 4 hours on 2 hour charge)

\*Correlation mode / GPS on / Maximum volume / Signal: 25uV/400Hz

# Time Synchronization and Logger Mode

---

## Time Synchronization

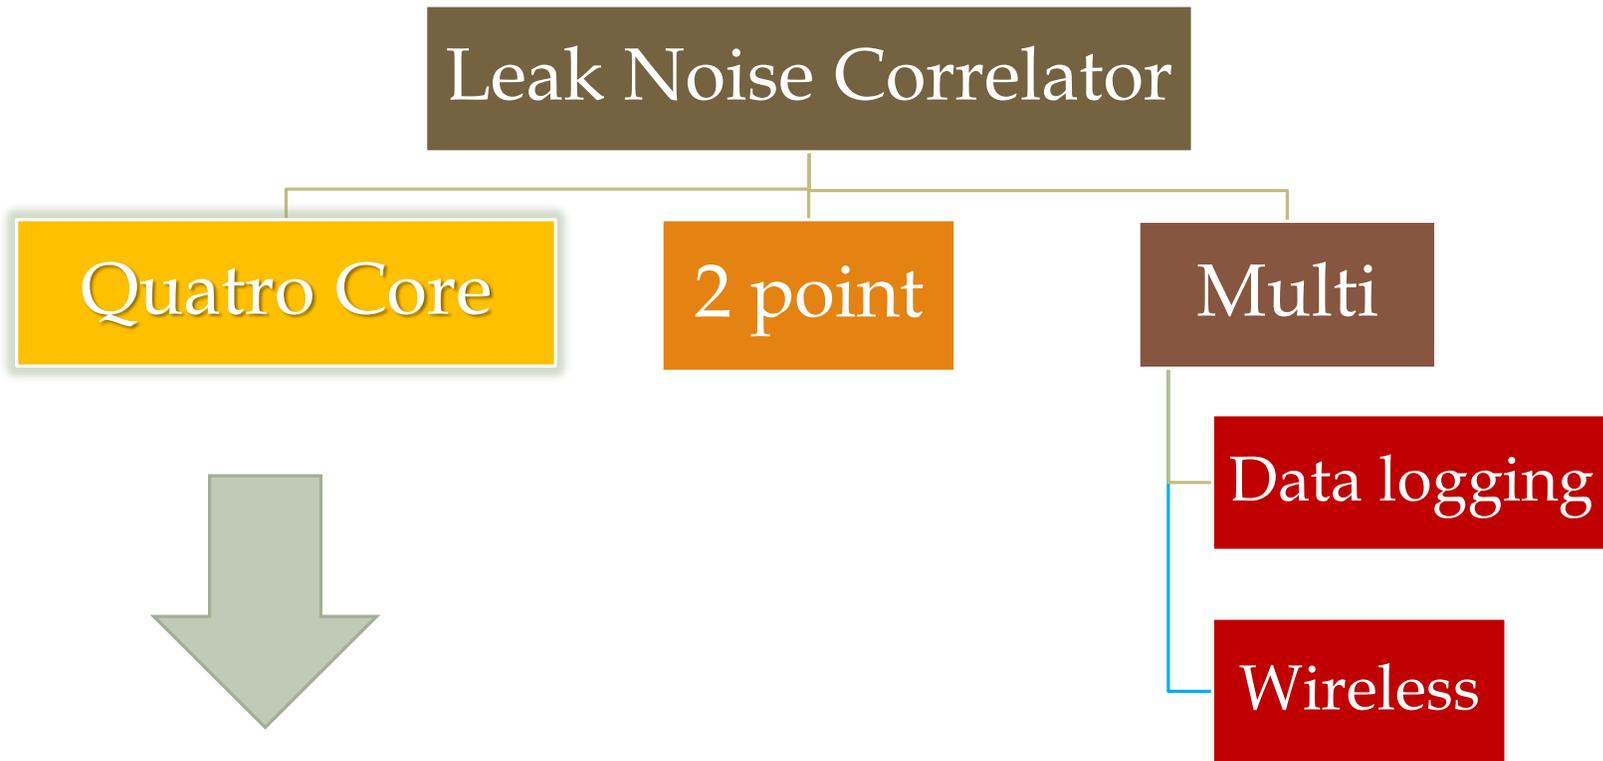

Verification	Condition	Error Range	
Wireless	70° F	Max. 27μs	1 hour or more of observation
	-4° F	Max. 21μs	1 hour or more of observation
	120° F	Max. 16μs	1 hour or more of observation

## Logger Mode

Verification	
GPS Synchronization Time	2 min 55sec - 4 min 40sec / Average 3min 28sec
Time Accuracy	Maximum 720μS in 4 hours (32° F 50° F 100° F)
Time Accuracy (Main unit correction function)	The difference between time of GPS and preamplifier are corrected after preamplifier recovered.

# New Category Leak Noise Correlator

---

**New Category of Leak Noise Correlator**

# What is Quatro Core ?

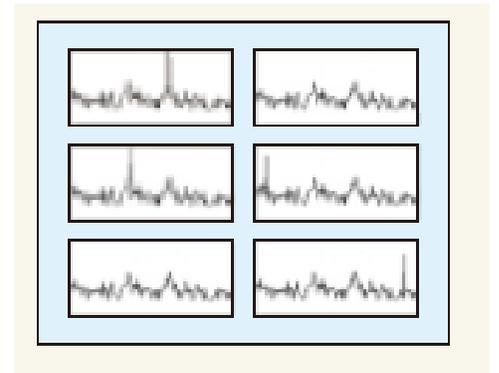

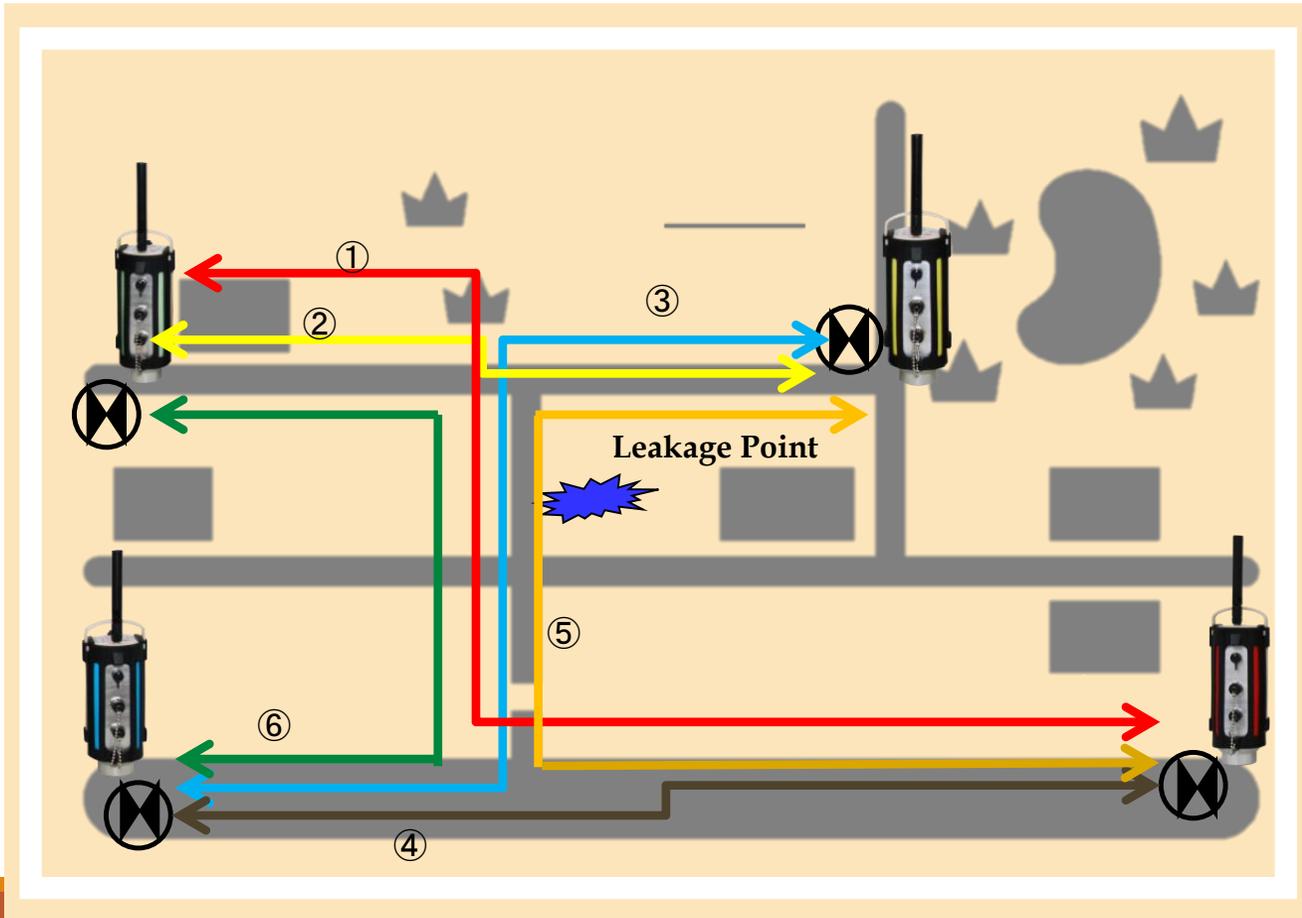

---

- ☞ Real time simultaneous correlation
- ☞ 6 Up to correlations can be done at once
- ☞ Able to check 6 screens at once

# Advantage of Quatro Core I

6 route simultaneous correlation processing & screen display

Enables for simultaneous correlation processing of up to six paths by using four sensors

## Advantage of Quatro Core II

---

### High correlation processing ability

Distance resolution is 8" on high precision mode.

(Delay time range :  $\pm 1,600$  ms, Sound speed : 3200' / sec)

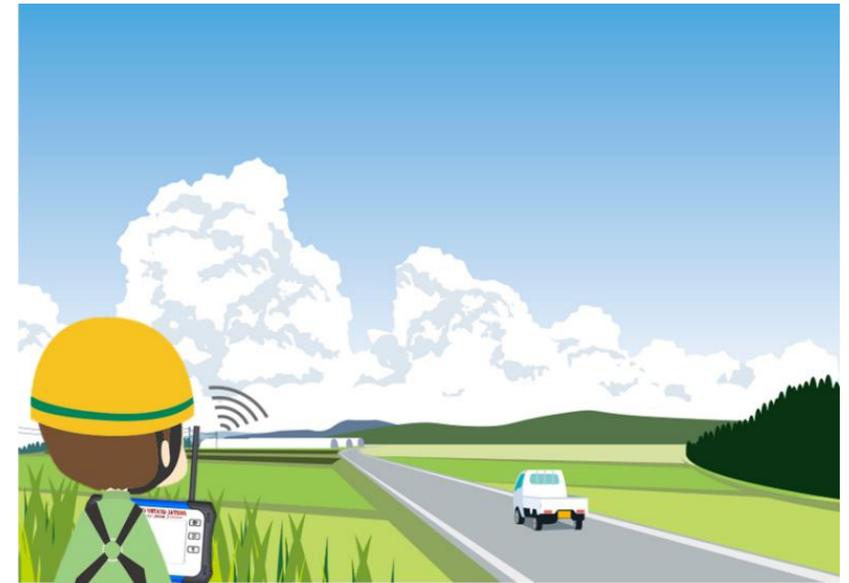

※ 4 times the resolution compared with our conventional device  
(model: LC-2500)

## Advantage of Quatro Core III

---

Long distance wireless communication is possible

The **distance** can be **further extended** by using the relay function of the sensor.

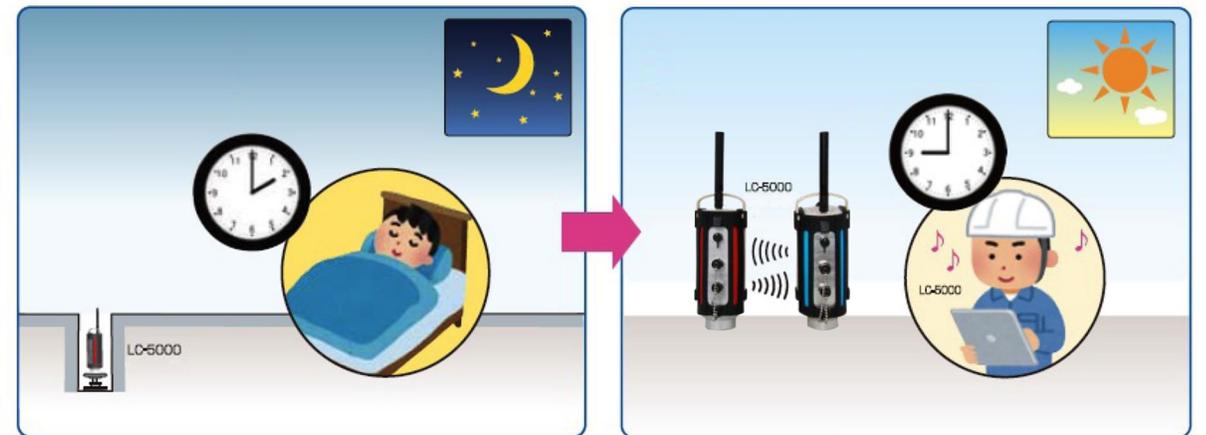

# Advantage of Quatro Core IV

## Logger mode

By setting the time in the logger mode, it is possible to perform **correlation processing after acquiring sound data** at the set time.

Even if you can not restrict traffic for a long time or you want to collect data at night, you can investigate without loss of opportunity

# Advantage of Quatro Core V

---

- Filter for large diameter pipes

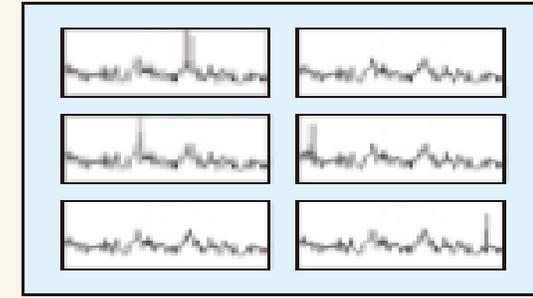

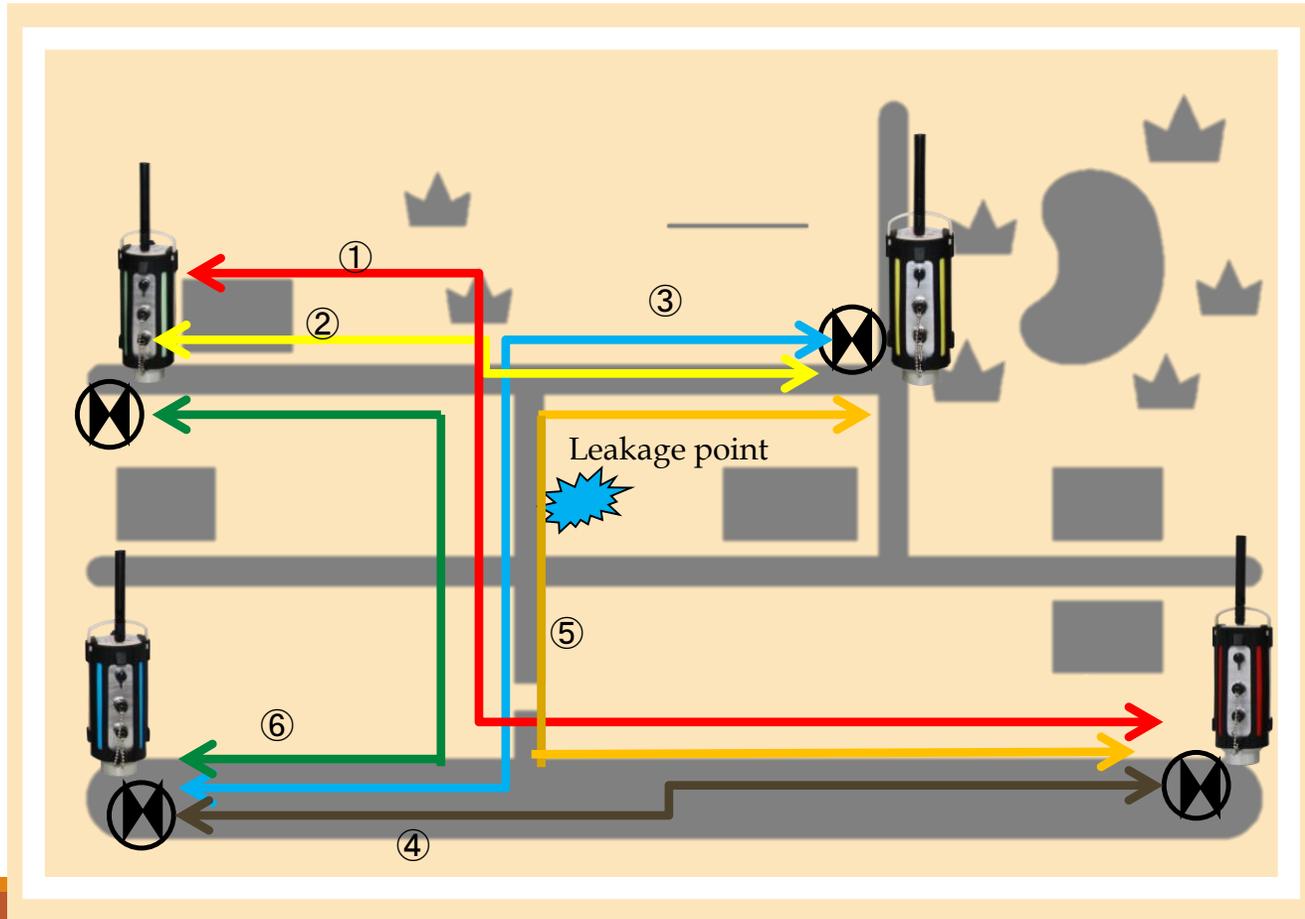

- Recalculation function

Data collected and saved during survey could be recalculated after changing/altering of pipe information.

- Recorrelation function

WAV file data saved in SD cards could be re-correlated.

# Quattro core application technique for time saving I

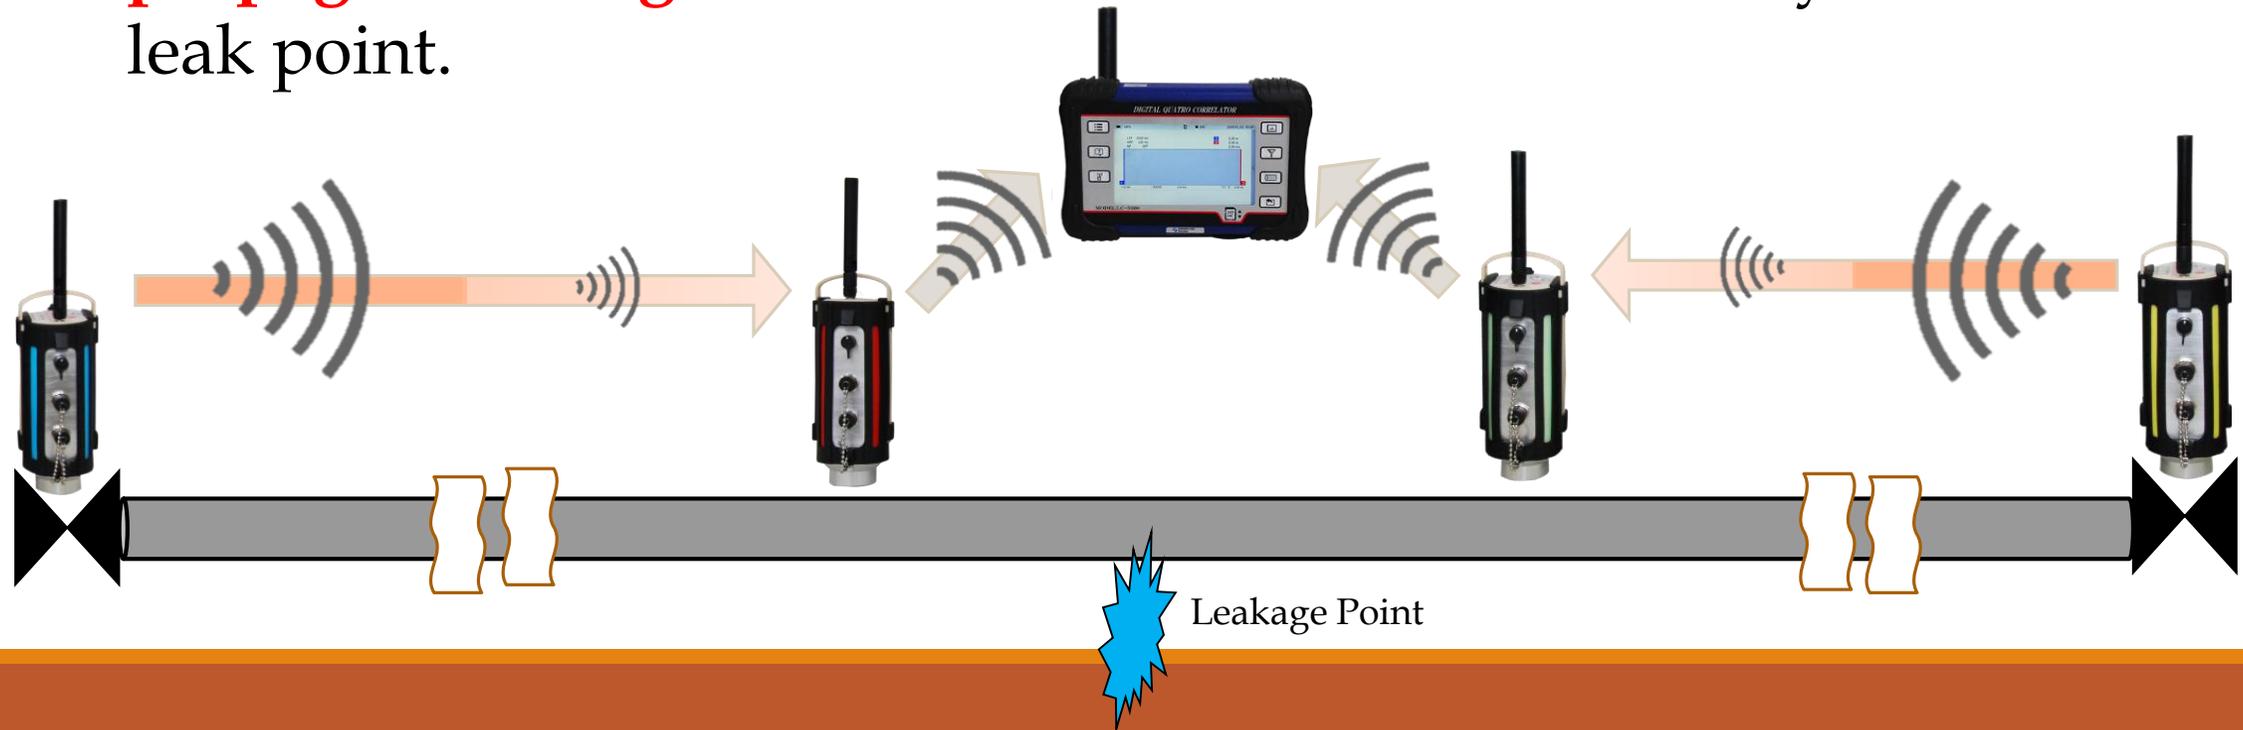

Performs up to **6 Simultaneous Correlations** at once using four sensors.

## Quattro core application technique for time saving II

When the distance between sensors is long

Use of a preamplifier as a repeater **expands the radio propagation range** even if there is no incidental facility near the leak point.

## Quattro core application technique for time saving III

---

In cases of no clear line of sight or building interference with antenna communication:

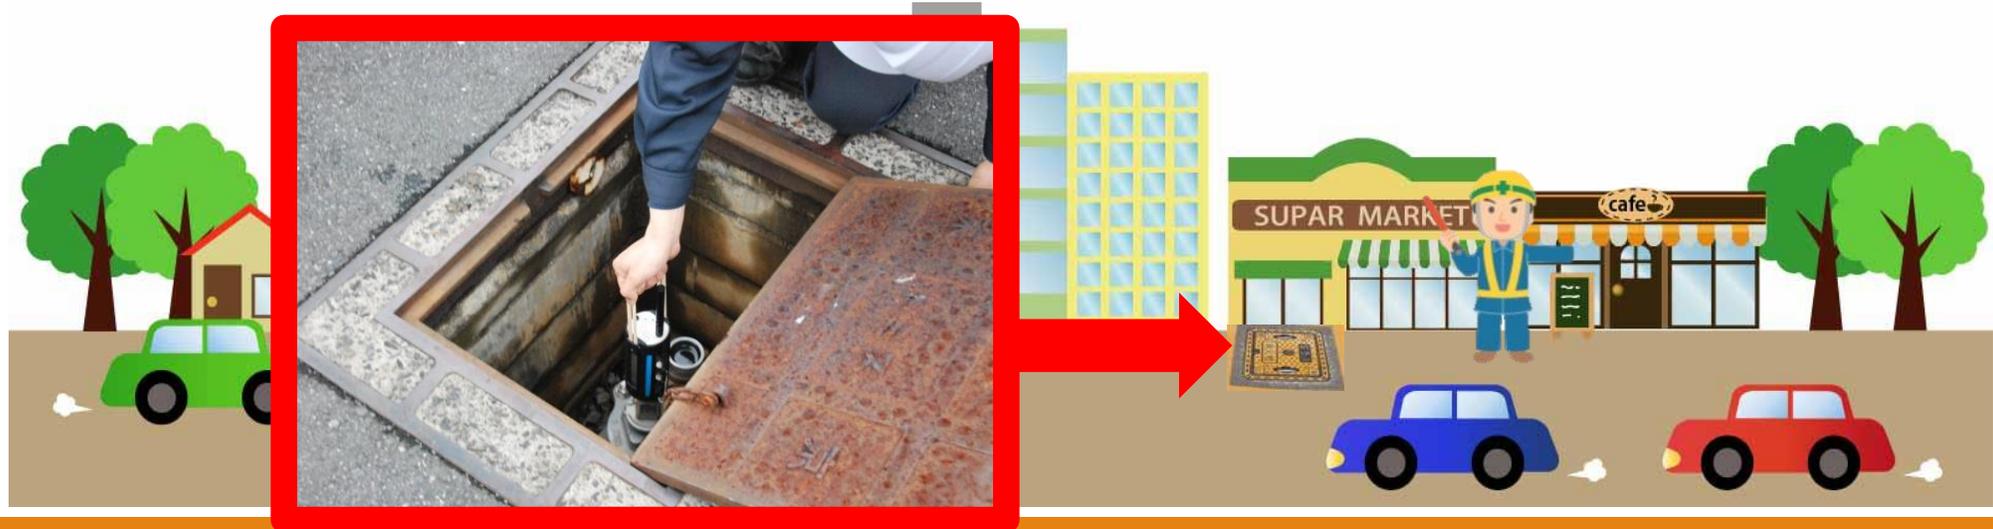

Use a sensor as a **repeater** to provide comfortable radio wave environment depending on location.

# Quattro core application technique for time saving IV

---

In the case of a site with a lot of traffic

As preamp and sensor are integrated, **storage in valve boxes/vaults & meter pits** is possible. Furthermore, if you use the logger mode, you can investigate while **avoiding the peak traffic volume**.

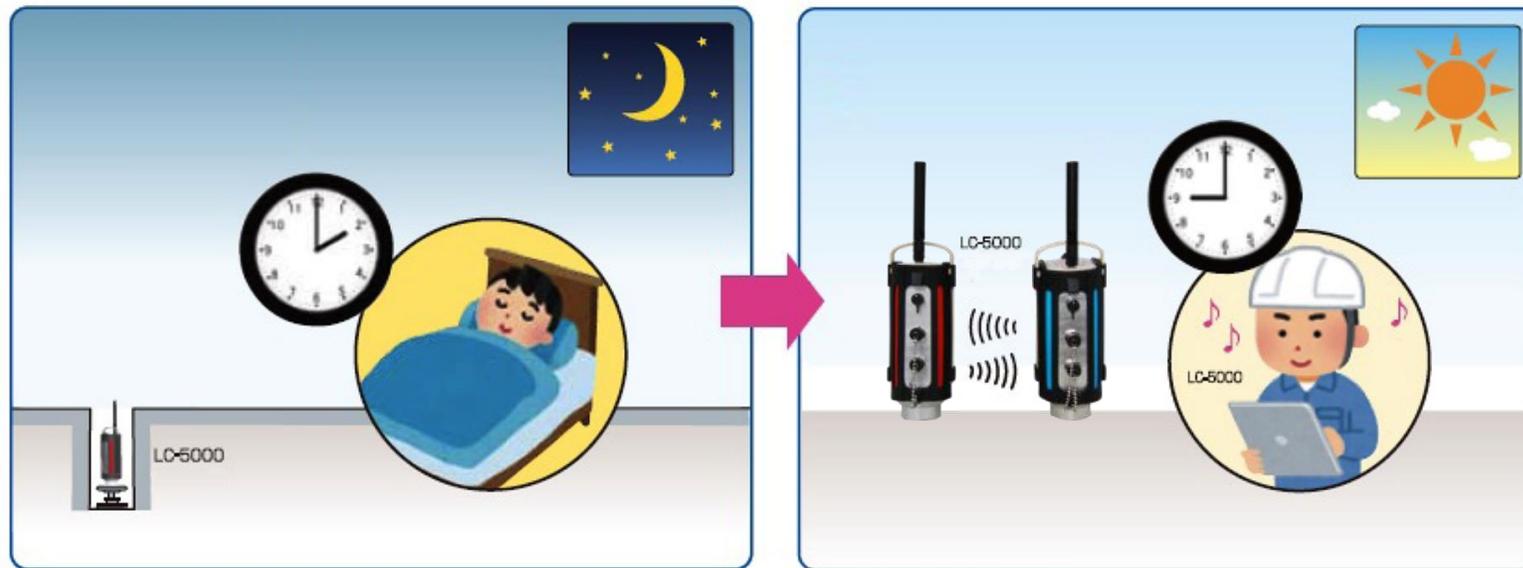

# Quattro core application technique for time saving V

## Correlating Leak Noise Logger

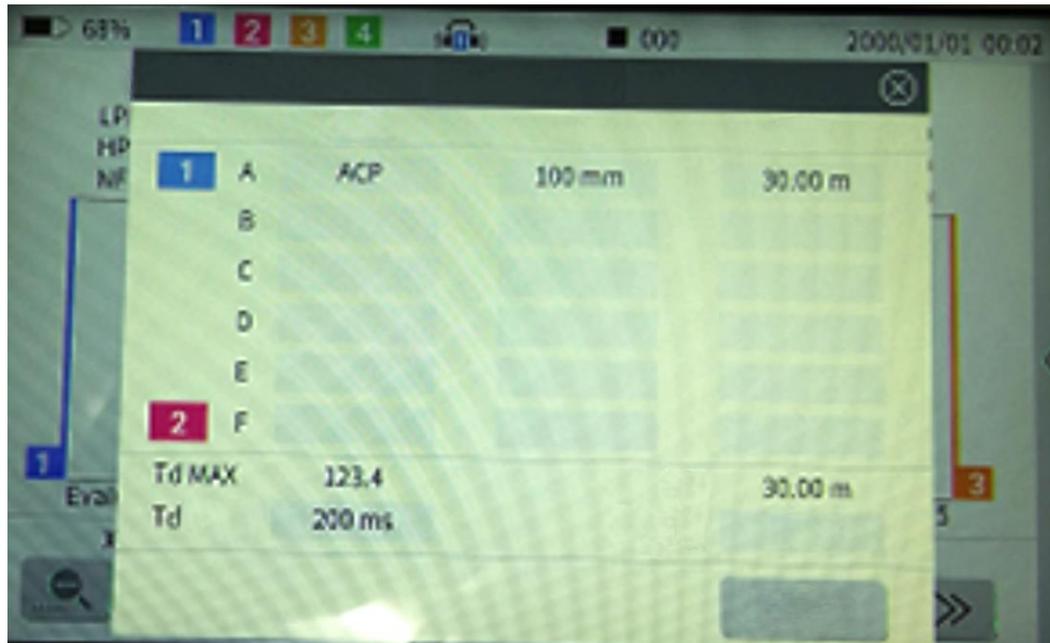

Set time in **logger mode**, install sensor on site

→ **The next day**, collect the sensor and acquire the data.

# Quattro core application technique for time saving VI

---

When an error in piping information is found after correlation processing

If you save the acquired data, it is possible to **re-calculate** after changing the piping information as it is.

# Quattro Core Summary

---

- ① **Contributing to time reduction** as it is equipped with 6-path simultaneous correlation function
- ② **Contributing to time savings** depending on how the sensor is used
- ③ **Contributing to shorten the time** by using logger mode even when you don't have time
